

TB PROGRAM MANAGEMENT COURSE

TWO AND ONE-HALF DAY INTENSIVE COURSE

Target Audience

This course was developed specifically for mid-level tuberculosis program managers at the state, regional/district, and local levels who have frequent interactions with frontline staff. Optimally, course participants should have occupied a TB program management position for at least one month and possess a basic knowledge of TB.

Course Description

This course was designed to improve the planning and managerial capabilities of TB program managers throughout the southeast. It was structured to include lectures, discussions, case presentations, role playing, and group exercises and is taught by SNTC staff and affiliate faculty throughout the region.

Topics Include

- Role of the program manager
- Principles of TB control
- Public health research and evaluation
- TB surveillance and epidemiology
- Program planning and funding
- Leadership and employee development
- Coordinating efforts through training and education
- Targeted testing/Special populations
- TB case management
- TB contact investigations guidelines
- Legal and ethical issues
- Infection control

Requirements

- Enrollment is limited to 25 participants from the southeastern region.
- Registration materials and application will be available on the SNTC website.
- Although registration is free, pre-registration is required.
- To earn CE, you must participate in all course events.
